

After-Sales UCD

Miquelon Filter Replacement

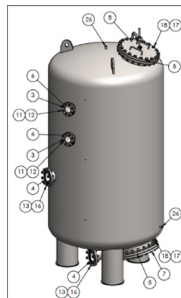

After-Sales UCD - Miquelon Filter Replacement

SUEZ has developed specific and exclusive equipment solutions to guarantee optimal execution of your water treatment processes. When replacement is necessary, equivalent parts must be used to ensure the reliability and performance of the installations. Our after-sales service can offer you these solutions.

Customer issues

On the Miquelon potable water treatment plant, built in 2007, the filter is showing signs of ageing and rust. In the event of failure, the island's water supply would be affected.

Proposed solution

Given the condition of the filter, we proposed replacing it with a stainless steel filter instead of a carbon steel filter. This model is more resistant to local operating conditions (sea air, cold and high salinity)..

Our added value

With no existing drawings, our engineering team redesigned the filter from scratch. Our production team supervised and managed the manufacture of the filter. Our logistics team then managed the transport to the destination. We assisted the customer with the final phase: dismantling / assembly and commissioning, to reduce plant downtime..
